

REACH Statement

Dear Customer,

On 1st June 2007, the new EU chemicals regulation REACH (Registration, Evaluation, Authorization and Restriction of Chemicals) came into effect.

The aim of REACH is to obtain complete control of the substances present on the European market, to improve the protection of human health and environment, and to ensure a better cooperation between the companies involved in the production chain.

KLOPMAN International Srl is committed to meeting the requirements under REACH, and aware of the obligations this involves for us downstream users.

To meet these obligations, we have obtained declarations from all our suppliers that substances manufactured in and/or imported into the EU have been appropriately pre-registered either directly or further up the supply chain – so as to avoid any disruption to business.

We also received confirmation from all our suppliers that the registration of all pre-registered substances is conducted in three phases, in line with the volume parameters, and according to the deadlines for registration in 2010, 2013 and 2018. We will continue communicating with all suppliers on any development or change.

By working closely with our supplier, we also ensure that no chemicals from the SVHC list (Substances of Very High Concern) are used in commercial products and that we are informed of any updates.

This general statement has been issued to cover our wide product range rather than addressing each product individually. We hope this will provide all required information to our customers, while helping to avoid excessive paperwork.
